BC2600EU SERIES SPECIFICATIONS

| | BC2600ICHEU | BC2600HHEU |
|-------------------------|---------------------|-------------------|
| Engine Type | Briggs and Stratton | Honda GX390 |
| Model Number | 219972 0151 F! | GX390UT2 DABG |
| Displacement | 344 cc | 390 cc |
| Fuel Capacity | 3.0 qt (2.80 L) | 3.0 qt (2.80 L) |
| Oil Capacity | 1.5 qt (1.4L) | 1.5 qt (1.4L) |
| Unit Weight | 325 lb (147.4 kg) | 325 lb (147.4 kg) |
| Overall Length | 80 in (2.03 m) | |
| Overall Width | 31 in (0.78 m) | |
| Overall Height | 48 in (1.21 m) | |
| Maximum Operating Slope | 15° | 20° |

SOUND DATA

SOUND LEVEL 91.6 Dba at Operator's position

112 dB

Sound tests were conducted in accordance with 2000/14/EEC and were performed on 11/30/11 under the conditions listed below.

NOTE

Sound power level listed is the highest value for any model covered in this manual. Please refer to serial plate on the unit for the sound power level for your model.

| | |
|----------------------|------------------------|
| General Conditions: | Sunny |
| Temperature: | 47°F (8.3°C) |
| Wind Speed: | 9 mph (14.5 kph) |
| Wind Direction: | South |
| Humidity: | 25% |
| Barometric Pressure: | 30.07" Hg (101.83 kPa) |

VIBRATION DATA

VIBRATION LEVEL .3g (3.13 m/s²)

Vibration levels at the operator's handles were measured in the vertical, lateral and longitudinal directions using calibrated vibration test equipment. Tests were performed on 11/30/11 under the conditions listed below.

BC2600 Euro Hydro Series Brush Cutter Owner's Manual

INSTRUCTION LABELS

The labels shown below were installed on your BILLY GOAT[®] Euro Hydro Brush Cutter. If any labels are damaged or missing, replace them before operating this equipment. Item numbers from the Illustrated Parts List and part numbers are provided for convenience in ordering replacement labels. The correct position for each label may be determined by referring to the Figure and Item numbers shown.

| | | | |

Brush Cutter Assembly Drawing

ASSEMBLY INSTRUCTIONS

Your BILLY GOAT® BC Self-Propelled Hydro Brush Cutter was shipped in one carton, completely assembled except for the upper handle assembly and the front caster bracket mount. Mounting hardware for the handle and caster bracket mount can be found in the parts bag. The throttle cable hardware is located on the bracket on the right side of the handle

READ all safety instructions before assembling unit.

NOTE

A CB18, C50, SC50 or MCB50 series dry or wet battery with a 17.2 Ah rating is required when replacing the battery.

NOTE

Numbers in parenthesis () refer to item numbers in the parts list.

1. Remove unit from carton. Make sure the following items that have been packed with unit:

- ☐ Upper Handle Assembly, P/N 501010, Electric model P/N 501009
- ☐ Owner's Manual, P/N 501505
- ☐ General Safety and Warnings Manual 100296
- ☐ Honda or Briggs and Stratton Engine Manual
- ☐ Warranty Card, P/N 400972
- ☐ Ty-Wraps (4 ea)
- ☐ Screwcap 3/8" – 16 X 2" P/N 8041054 (qty 4)
- ☐ Washer 3/8" flat P/N 8171004 (qty 4)
- ☐ Nut Lock 3/8"-16 P/N 8160003 (qty 4)
- ☐ Nut lock #10-24 hex P/N 8164005 (qty 2)
- ☐ Screw machine flat HD Phil P/N 830514 (qty 2)
- ☐ Spring pin clevis P/N 501318 (qty 1)

WARNING: DISCONNECT spark plug wire before assembling unit.

2. Remove mounting hardware from the hardware bag.
3. Attach the handle to the engine base with the items 72, 73, and 48.
4. Tighten mounting hardware on handle braces (5 and 6).
5. Attach the throttle (82) to the right hand bracket (70) using the hardware items 83 and 84. Tighten securely and make sure the cable isn't binding.
6. Attach the Blade drive cable to the lever and seat the plastic insert into the bracket on the left side of the handle
7. Secure the drive and blade cables with the ty-wraps provided
8. Attach the caster bracket frame to the deck with the clip (item 164), make sure the clip section snaps completely around the neck of the yoke.
9. Reconnect spark plug wire.

OPERATION

OPERATOR CONTROLS

The operator's station is at the rear of the machine between the handlebars. The operator should STAND in a position to allow both handlebars to be grasped firmly and which allows sufficient leverage to steer the machine. Operator's controls are shown below.

Operator Control Locations

- | | | | |
|---|--------------------|---|--------------|
| 1 | Blade Clutch Lever | 5 | Pull Starter |
| 2 | Forward Lever | 6 | Choke |
| 3 | Reverse Lever | | |
| 4 | Throttle | | |

STARTING

CHECK engine oil level before operating machine.

1. Place equipment on a level, firm surface that is free of rocks or other debris.
2. Place throttle in Fast position.

Throttle

3. Pull choke out (Honda engine only).

Choke

WARNING: DO NOT START equipment with drive or blade clutch engaged.

4. Units equipped with manual starters: Pull starter rope to start engine.

WARNING: PULL STARTER CORD slowly until resistance is felt. Then pull cord rapidly to avoid kickback.

5. Push choke in (Honda engine only).
6. Pull throttle control back to and allow engine to reach correct operating speed.

CUTTING

The best performance is achieved when cutting in dry conditions. The quality of the cut is directly related to ground speed during cutting. Under most conditions cutting should be done at a slower ground speed. Fast speeds should be reserved for conditions where weeds and brush are thinned out or not very tall. If the quality of the cut is not satisfactory, attempt at slower speeds.

1. Press blade clutch handle down to engage blade. Allow blade to spin up to normal operating speed.

Blade Clutch Lever

2. Pull Forward or Reverse Drive lever up to engage transaxle in desired direction.

Reverse Drive Lever (left hand)

Forward Drive Lever (right hand)

DECK HEIGHT ADJUSTMENT

1. To raise and lower the cutting height on the deck, pull the knob upwards and rotate the handle Clockwise to raise the cutting height and counter-clockwise to lower the cutting height. DO NOT ADJUST HEIGHT WITH THE BLADE RUNNING

SHUT DOWN

1. Release drive lever to disengage transaxle.
2. Release blade clutch handle to disengage blade.
3. Move the throttle to the slowest possible position on the throttle control.

CLEARING A CLOGGED CUTTING DECK

WARNING: **DISCONNECT** spark plug wire before servicing unit.

1. Shut engine off and wait for blade to stop completely.
2. Disconnect spark plug wire.
3. Remove clog from cutting deck.

WEAR durable gloves. Clog may contain sharp materials.

4. Reconnect spark plug wire.

MAINTENANCE

PERIODIC MAINTENANCE

Periodic maintenance should be performed at the following intervals:

| Maintenance Operation | Every Use | Daily or Every 5 Hours | Every 25 Hours | Every 50 Hours | Every 100-150 Hours |
|---|-----------|------------------------|----------------|----------------|---------------------|
| Inspect for worn or damaged parts. | • | | | | |
| Check for excessive vibration | | • | | | |
| Inspect for loose parts. | | • | | | |
| Sharpen blade. Note: nut will need to be replaced when blade is removed | | | • | | |
| Inspect belts for wear. | | | • | | |
| Lubricate throttle control cable and linkage. | | | • | | |
| Check blade clutch cable tension. | | | | • | |
| Inspect battery for corrosion, damage or leaks (electric start units only). | | | | • | |
| Apply anti-seize compound to rear axles. | | | | • | |
| Check battery strap for excessive wear or rips | • | | | | |
| Replace blade drive and transaxle drive belts. | | | | | • |

COMMON REPLACEMENT PARTS

- Blade. P/N 501221. Original equipment replacement blade.
- Transaxle Drive Belt. P/N 501268. Original equipment replacement drive belt.
- Blade Drive Belt. P/N 501220. Original equipment replacement drive belt.
- Throttle Control Assembly. Throttle control including cable.

CLEANING

Your BILLY GOAT® Brush Cutter should be cleaned periodically to ensure optimum performance and service life. Clogs and debris should be removed from the blade area and debris should be removed from the engine cooling fins. A garden hose or pressure washer may be used for cleaning.

CAUTION:

DO NOT SPRAY WATER DIRECTLY ON THE BLADE CLUTCH WHEN USING A POWER WASHER. SEE FIGURE BELOW.

BLADE REMOVAL AND SHARPENING

READ all safety instructions before servicing unit.

NOTE

Numbers in parenthesis (N) refers to the item number in Illustrated Parts List.

WARNING:

DISCONNECT spark plug wire before servicing unit.

1. Disconnect spark plug wire.
2. Lift and support front of unit to allow access to underside.

WARNING:

UNIT IS HEAVY. Make sure support is adequate to support weight of machine.

3. Block blade to prevent it from rotating during removal.
4. Remove blade bolt (23), and friction washer (39).
5. Remove blade (2) and install replacement blade.

NOTE

When replacing the blade use BILLY GOAT Industries PN 501224 only.

NOTE

When sharpening blade make sure to sharpen all cutting edges. If the lock nut is removed and replaced more than once, it should be replaced with a new lock nut (P/N 8160009).

6. Attach new blade with new blade bolt (23), and new friction washer (39) removed earlier included with your new blade.

NOTE

Inspect fasteners for wear and replace if necessary.

7. Torque blade bolt to 40 ft-lbs.
8. Reconnect spark plug wire.

BLADE DRIVE BELT TENSION

READ all safety instructions before servicing unit.

WARNING:

DISCONNECT spark plug wire before servicing unit.

NOTE

The Blade Drive belt is under constant tension by the idler arm on the deck

1. Disconnect spark plug wire.
2. Loosen four screws (27) holding belt deck cover (29) and remove the cover.
3. Examine condition of belt and amount of tension on belt.
4. If the idler is not providing enough tension inspect the spring (item 50) attaching it to the spindle base. If not enough tension is being put on the arm, replace the spring.
7. Replace engine base door (29) and secure with screws removed earlier.
8. Reconnect spark plug wire.
9. Check belt tension by operating unit under conditions that caused belt slippage. If belt continues to slip it may require replacement before operation may continue.

BLADE CLUTCH ADJUSTMENT

READ all safety instructions before servicing unit.

WARNING:

DISCONNECT spark plug wire before servicing unit.

1. Disconnect spark plug wire.
2. As the clutch/brake wears or begins slipping or squealing, adjustment may be required to maintain proper cable tension and clutch engagement. A properly adjusted blade clutch should require 10 lbs. of force to depress the end of the clutch lever. The blade clutch cable spring should stretch 1/4" to 3/8" (6.4-9.5 mm).
3. Adjust cable tension by tightening or loosening cable adjustment nut on rear of engine base (see below). Be sure to leave enough slack in cable to allow blade brake to engage.

Blade Cable Adjustment

CAUTION:

If clutch continues to slip or squeal, do not operate equipment until adequate adjustment or repair has been performed. Improper adjustment can cause clutch to overheat and slip, greatly reducing performance and clutch life.

4. Reconnect spark plug wire.

TRANSAXLE DRIVE BELT REMOVAL AND REPLACEMENT

READ all safety instructions before servicing unit.

NOTE

Numbers in parenthesis (N) refers to the item number in Illustrated Parts List.

WARNING: **DISCONNECT** spark plug wire before servicing unit.

1. Disconnect spark plug wire.
2. Lift and support the rear of the unit to allow access to the underside
3. Unattach the spring (item 50) from the bracket (item 98) that is keeping tension on the drive belt.
4. Walk the belt (item 121) off of the clutch (item 54) by slowly pulling the engine over. **WARNING:** use caution not to pinch fingers between the belt and clutch.
5. Slip the belt off of the transaxle pulley.
6. Replace the belt in reverse order. **NOTE:** make sure the belt is seated properly in the clutch and transaxle and make sure that it does not bend over the fan blades on the transaxle.

BLADE DRIVE BELT REMOVAL AND REPLACEMENT

READ all safety instructions before servicing unit.

WARNING: **DISCONNECT** spark plug wire before servicing unit.

1. Disconnect spark plug wire.
2. Lift and support rear of unit to allow access to underside.

WARNING: **UNIT IS HEAVY.** Make sure support is adequate to support weight of machine.

BC2600 Euro Hydro Series Brush Cutter Owner's Manual

3. Loosen the four screws (27) holding deck belt cover (29) and remove cover.
4. Follow the steps 3 and 4 in the Transaxle drive belt removal section to remove the Transaxle drive belt.

NOTE

It may be necessary to pry idler pulley (35) away from its original position to release belt, using a ratchet with an extension in the square hole on the idler arm should allow the proper leverage to pull it off the belt.

5. Relieve the tension on the blade belt by pulling the deck idler arm off of the belt. Then walk the belt off of the deck pulley.
6. Feed the belt back to the engine base then slip the belt off of the clutch.
7. Install the new belt in reverse order making sure the belt is seated properly in the clutch.

Removing tension on the blade belt

8. Reconnect spark plug wire.

Belt Routing Diagram
(Top View of Machine)

TRANSAXLE DRIVE ADJUSTMENT

READ all safety instructions before servicing unit.

WARNING: **DISCONNECT** spark plug wire before servicing unit.

1. Disconnect spark plug wire.
2. Adjustments to cable tension are made at the barrel entering the Drive Control Levers.
3. Adjust cable tension by tightening or loosening cable adjustment barrel on rear of engine base (see below).

NOTE

Moving the cable adjustment barrel **OUT** increases tension. Moving the barrel **IN** decreases tension. Increasing the tension too much will cause the drive to stay engaged whereas not enough will cause it not to engage when the lever is pulled.

Transaxle Cable Adjustment

4. Reconnect spark plug wire.

TROUBLESHOOTING

| Problem | Possible Cause | Corrective Action |
|---|---|--|
| Engine will not start. | Throttle is set to Slow/Stop position. | Move throttle to fast position. |
| | Out of gasoline. | Fill gas tank. |
| | Old or contaminated gasoline. | Drain gas tank and fill with fresh gasoline. |
| | Spark plug wire disconnected. | Connect spark plug wire. |
| | Dirty air cleaner. | Clean or replace air cleaner. |
| Starter does not turn. (Electric start only) | Battery low or dead. | Charge or replace battery. |
| | Battery cable disconnected or corroded. | Clean and secure battery terminals. |
| | Defective starter switch or wiring harness. | Replace starter switch or wiring harness. |
| | Defective starter. | Replace starter. |
| Will not cut or cutting performance is poor. | Blade drive cable tension incorrect. | Adjust blade drive cable tension. |
| | Dull blade. | Sharpen or replace blade. Note: nut will need to be replaced when blade is removed |
| | Clogged deck. | Unclog deck. |
| | Excessive debris built up on or blocking blade. | Clear debris from blade area. |
| | Engine RPM set too low. | Check engine RPM. |
| Abnormal vibrations. | Blade loose or out of balance. | Check blade for tightness. Rebalance if necessary. |
| | Engine loose. | Check engine mounting bolts. |
| | Blade drive belt worn. | Replace blade drive belt. |
| Belt slips or smokes. | Belt tension too low. | Adjust belt tension. |
| | Belt worn or stretched. | Replace belt. |
| | Pulleys worn or damaged. | Replace pulleys. |
| Clutch slips or squeals. | Clutch cable tension too low. | Replace spring on idler arm. |
| | Clutch worn or damaged. | Replace worn or defective clutch assembly parts. |
| Blade brake will not engage. | Inadequate slack in clutch cable. | Adjust clutch cable. |
| | Clutch worn or damaged. | Replace clutch/brake assembly. |
| Transaxle will not engage. | Clutch lever not engaging clutch. | Adjust clutch cable. |
| | Clutch cable defective. | Replace cable. |
| | Belt worn or broken. | Replace belt. |
| Transaxle will not disengage. | Clutch cable out of adjustment. | Adjust clutch cable. |
| Engine will not turn over. | Defective blade clutch. | Replace clutch. |
| | Engine problem. | Contact an authorized servicing dealer for your engine. |
