

## Power Equipment

Code : CC-274

Date : March 21, 1994 (REVISED April 11, 1994)

Subject: Bagger adapters.

We have had many questions as to the parts needed to mount last years bagging attachments to the current Series 2000 tractors. The following are the parts required to fit the models 190-311-100 and the 190-312-100 to the respective decks found on the Series 2000 tractors. Order and install the following parts:

<u>PART #</u>	<u>REF #</u>	<u>QTY.</u>	<u>NAME</u>
703-2489	4	1	Cross Brace
703-2490	5	2	Catcher Support Bracket
711-0309	8	1	Clevis Pin
723-0383	1	1	Strap
714-3020	11	1	Cotter Pin

During installation of the 190-312-100 baggers some minor changes must be made to the Support tube Mtg. Brkt (2). The diagram below indicates where two additional holes are needed. Install both the upper and lower support tube mounting brackets to the right catcher support bracket while mounted to the tractor. You will note that the holes on the left side of the support tube mounting brackets do not match with the two catcher support bracket holes. Mark and drill two holes in each of the support tube mounting brackets. The new strap is to be used to secure the bagger tube to the mower housing. Proceed with the rest of the mounting instructions.
